

## EFFISUS BOND GF TAPE

### DESCRIPTION

PE butyl-rubber tape. The backing is in a thin polyolefin film that is highly stretchable both lengthwise and crosswise, and coated with a thick, cold welding butyl-rubber adhesive.

Effisus Bond GF Tape adheres and reliably seals metals, plastics, bricking, concrete, and wood.

Effisus Bond GF Tape is used in a building sheathing as a durable ealing tape for sealing air barriers according to DIN 4108 Part7.

Due to its enormous flexibility it may be especially used for sealing around complex shapes.

### TECHNICAL DATA

Technical data	
Backing	Polyolefin film highly stretchable
Elongation	> 300%
Adhesion	> 15N/25mm
Temperature range	-30°C to + 80°C
Thickness	2.0 mm
Butyl rubber	Back
Tack	Very high

### OTHERS

**Length**

10m

**Colour**

Black

<b>Widths mm</b>	50	80	100	120	150
