

## Flashing solution for metal roof penetrations

Effisus Stopper MR is the ideal solution to permanently seal metal roof penetrations. It combines with its EPDM or Silicone composition, a base edged with aluminum strands, that easily adapts to virtually any metal roof profile configuration.

Effisus Stopper MR is designed to permanently seal metal roof penetrations with diameters from 3 to 750mm. It is flexible and absorbs vibrations and movements, while resisting the most demanding atmospheric conditions. Different design options are available, making sure that there is an Effisus Stopper MR solution for the most different needs.

# Effisus Stopper MR

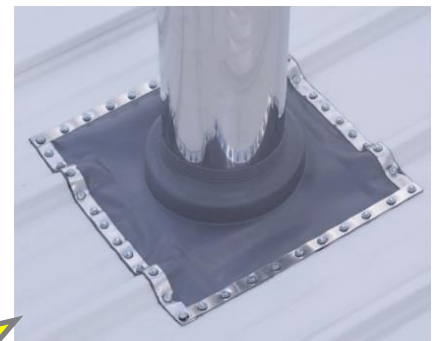

### Effisus Stopper MR

- Soft aluminum base that easily adapts to most metal roof profiles.
