

## EFFISUS TIGHT+ KM GROMMET

### DESCRIPTION

Air-tightness grommet for cables and small pipes.

If pipes or cables penetrate the airtightness layer, they must be securely sealed. The most suitable means of doing this is with airtightness grommets made from EPDM. This flexible material allows a tight fit, and Effisus Tight+ KM Grommet allows for a secure feed-through for cables and pipes. Effisus Tight+ KM Grommet feature an integrated adhesive with a release paper for ease of application.

For an airtight seal around pipes and cables which pass through the Effisus Breather Membrane. They are made of non-ageing elastic EPDM rubber in a high adhesive square. With release paper.

Offers high protection against piercing due to its high elasticity.

### TECHNICAL DATA

Technical data	
Property	Details
Material	EPDM acrylate solvent-free adhesive tape
Temperature resistance	-40°C to 100°C
Grommet sizes	Effisus Tight KF Grommet – single cable - for cable diameters between 6 – 12mm – 145mm x 145mm
	Effisus Tight2 KD Grommet – twin cable - for cable diameters between 6 – 12mm – 145mm x 145mm
	Effisus Tight+ KM Grommet – for cable diameters between 6 -12mm – 140mm x 140mm
3rd party accreditation	IAB
Life expectancy	60 years+
Usage	Interior & Exterior
